Description:

Our team will be developing a bus tracking system that allows students, teachers, and staff to view live bus locations, routes, pickup points, and estimated time of arrival. The system will feature an admin dashboard for managing bus and driver information, routes, and pickup points, and sending custom notifications to all users. The system will use driver's mobile phone as a GPS tracking system for the bus and include user-friendly interfaces for mobile platforms. Our goal is to create a secure, reliable, and user-friendly system that enhances the overall transportation experience.

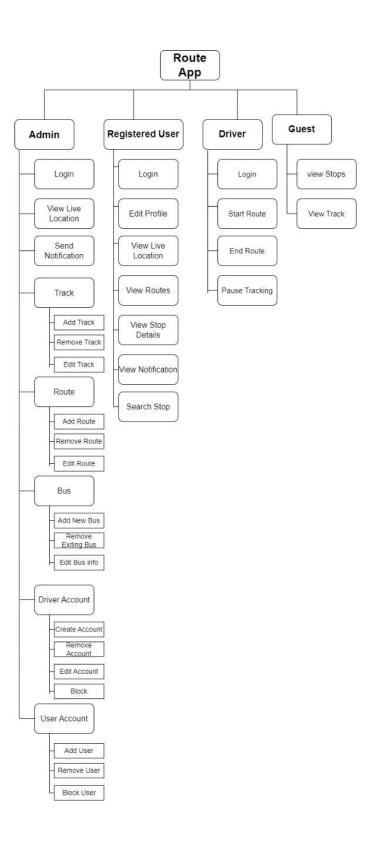

Scope:

The scope of route app involves the development of a software platform that enables the management for all bus routes. The system should be designed to facilitate the students and staff to view the stops and tracks of all the routes, their live location and also any alternative route their route is missed. The system should allow the driver to start and stop the route tracking. The system should also allow the admin to send to add or remove new route or stops in the route, add or block any user, driver and to assign a route to the driver.

Vision Statement:

For students, staff members, and transport officers, who want to check and track their bus route via mobile app. KSK Routes is a bus route tracking app that will provide the facility to students and staff members to track their specific buses and the current location of the bus. Unlike Google Maps, the focus is to provide students and staff members an interactive UI and push notifications in case their route bus has started. Our product will lessen the transport office's burden of managing everyday student-driver issues and provide students or staff members with effective ways to reach university in case their route is missed.

Work Break-down Structure:

Requirements Analysis:

1. Functional Requirements:

FR001 Admin Accounts FR002 Admin shall be able to add admin FR003 Admin shall be able to import admin FR004 Admin shall be able to export admin FR005 Admin shall be able to block admin FR006 Admin shall be able to unblock the blocked admin FR007 Admin shall be able to remove admin FR008 Admin shall be not be able to update upper-ranked admin

FR009 Driver Accounts

- FR010 Admin shall be able to add driver
- FR011 Admin shall be able to import driver
- FR012 Admin shall be able to export driver
- FR013 Admin shall be able to block driver
- FR014 Admin shall be able to unblock the blocked driver
- FR015 Admin shall be able to remove driver

FR016 Members Accounts

- FR017 Admin shall be able to add members
- FR018 Admin shall be able to import members
- FR019 Admin shall be able to export members
- FR020 Admin shall be able to block members
- FR021 Admin shall be able to unblock the blocked members
- FR022 Admin shall be able to remove members

FR023 Updating Tracks

FR024	Admin shall be able to add Track				
FR025	Admin shall be able to import Tracks				
FR026	Admin shall be able to export Tracks				
FR027	Admin shall be able to remove Track				
FR028	Admin shall be able to view Track				
FR029	Admin shall be able to add stop in Track				
FR030	Admin shall be able to remove stop in Track				
FR031	Admin shall be able to edit stop in Track				
FR032	Admin shall be able to build path with map in Track				
FR033	Admin shall be able to copy path of one Track to another Track				
FR034	Admin shall be able to edit path of Track				
FR035	Admin shall be able to points in path of Track				
FR036	Updating Routes				
	Updating Routes Admin shall be able to add Route				
FR037	•				
FR037 FR038	Admin shall be able to add Route				
FR037 FR038 FR039	Admin shall be able to add Route Admin shall be able to Import Routes				
FR037 FR038 FR039 FR040	Admin shall be able to add Route Admin shall be able to Import Routes Admin shall be able to Export Routes				
FR037 FR038 FR039 FR040 FR041	Admin shall be able to add Route Admin shall be able to Import Routes Admin shall be able to Export Routes Admin shall be able to remove Route				
FR037 FR038 FR039 FR040 FR041 FR042	Admin shall be able to Import Routes Admin shall be able to Export Routes Admin shall be able to remove Route Admin shall be able to remove Route				
FR037 FR038 FR039 FR040 FR041 FR042	Admin shall be able to Import Routes Admin shall be able to Export Routes Admin shall be able to remove Route Admin shall be able to remove Route Admin shall be able to edit Route Admin shall be able to generate Timetable of Routes				
FR037 FR038 FR039 FR040 FR041 FR042 FR043	Admin shall be able to Import Routes Admin shall be able to Export Routes Admin shall be able to remove Route Admin shall be able to remove Route Admin shall be able to edit Route Admin shall be able to generate Timetable of Routes				
FR037 FR038 FR039 FR040 FR041 FR042 FR043	Admin shall be able to Import Routes Admin shall be able to Export Routes Admin shall be able to remove Route Admin shall be able to edit Route Admin shall be able to generate Timetable of Routes Admin should be able to select Import mode of Route				

FR049 Tracking

FR047 Admin shall be able to edit bus

FR048 Admin shall be able to export bus

FR050 Admin shall be able to view Live Location of active routes

FR051 Admin shall be able to stop tracking of active routes

FR052 Messages

FR053 Admin shall be able to send messages to driver

FR054 Admin shall be able to send messages to members

FR055 Admin shall be able to delete send message

FR056 Call

FR057 Admin shall be able to call a driver.

2. Non Functional Requirements:

NFR001	Admin Accounts					
NFR001	System shall accept only CSV file as an Import of Admin Accounts					
NFR002	Admin shall be able to generate a CSV file as an export of Admin Accounts					
NFR003	System should automatically send notification to admin when he get blocked					
NFR004	Blocked Admin should not be able to login through its account					
NFR005	Driver Accounts					
NFR006	System shall accept only CSV file as an Import of Driver Accounts					
NFR007	Admin shall be able to generate a CSV file as an export of Driver Accounts					
NFR008	System should automatically send notification to driver when he get blocked					
NFR009	Blocked driver should not be able to login through its account					
NFR010	Members Accounts					
NFR011	System shall accept only CSV file as an Import of Members Accounts					
NFR012	Admin shall be able to generate a CSV file as an export of Members Accounts					
NFR013	System should automatically send notification to member when he get blocked					
NFR014	Blocked member should not be able to login through its account					
NFR015	Updating Tracks					
NFR016	System shall accept only CSV file as an Import of Tracks					
NFR017	Admin shall be able to generate a CSV file as an export of Tracks					
NFR018	System should automatically delete reference from routes of Deleted Track					
NFR019	System should not accept invalid format of text in a path of Track					
NFR020	Updating Routes					
NFR021	System shall accept only CSV file as an Import of Route					
NFR022	Admin shall be able to generate a CSV file as an export of Route					
NFR023	Admin must be able to select multiple option in Import of Route					

NFR024	System should have adding Tracks only option in Import of Route				
NFR025	System should have adding Bus only option in Import of Route				
NFR026	System should have adding Drivers only option in Import of Route				
NFR027	Bus Details				
NFR028	System shall accept only CSV file as an Import of Route				
NFR029	Admin shall be able to generate a CSV file as an export of Route				
NFR030	Tracking				
NFR031	System shall send notification to driver after admin stop it's tracking				
NFR032	Messages				
NFR033	System should send a notification if user receive a message				
NFR034	Admin shall be able to send message to Admin, Driver and Members				

NFR035 Call

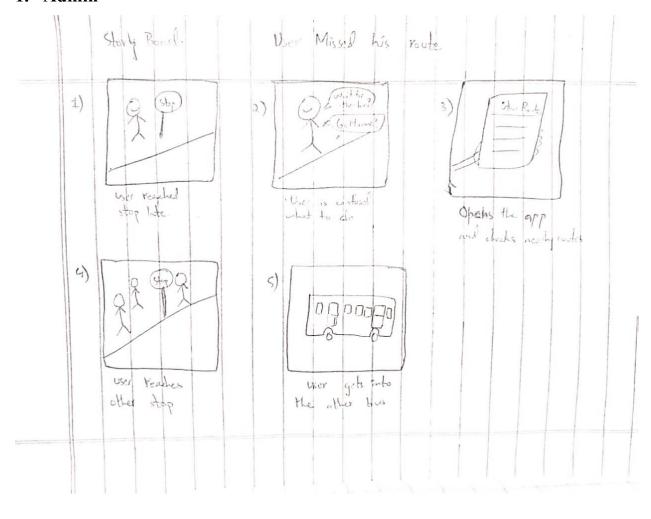

NFR036 System should allow only one admin on a call with one driver.

3. Physical Product Requirements:

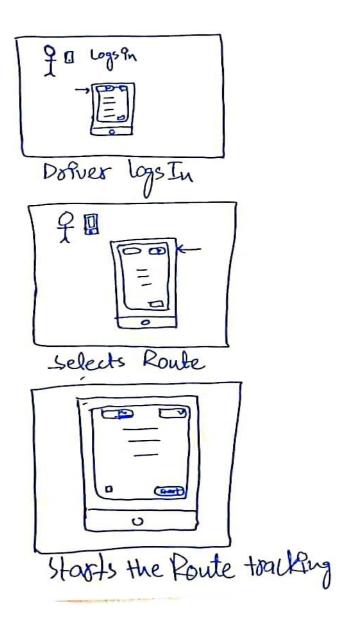

- Computer Hardware
- Mobile Devices
- Internet Connection

4. Storyboards:

1. Admin

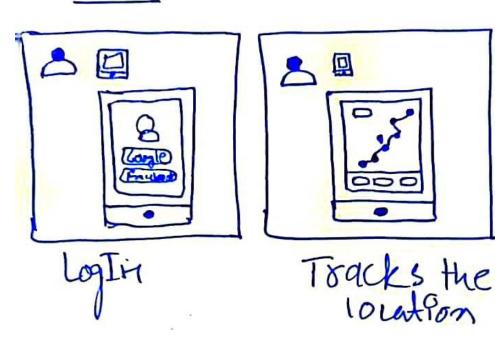

2. Driver

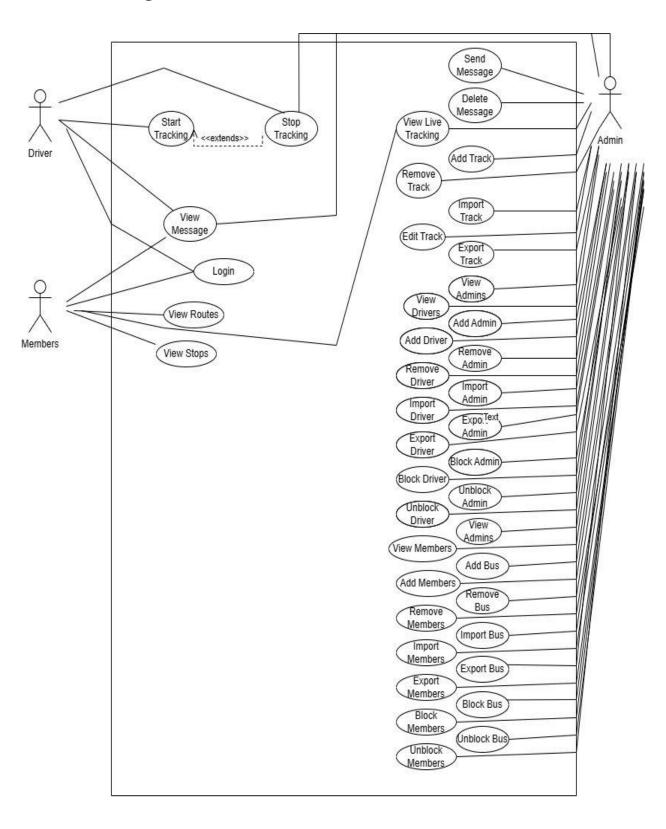

3. Member

User

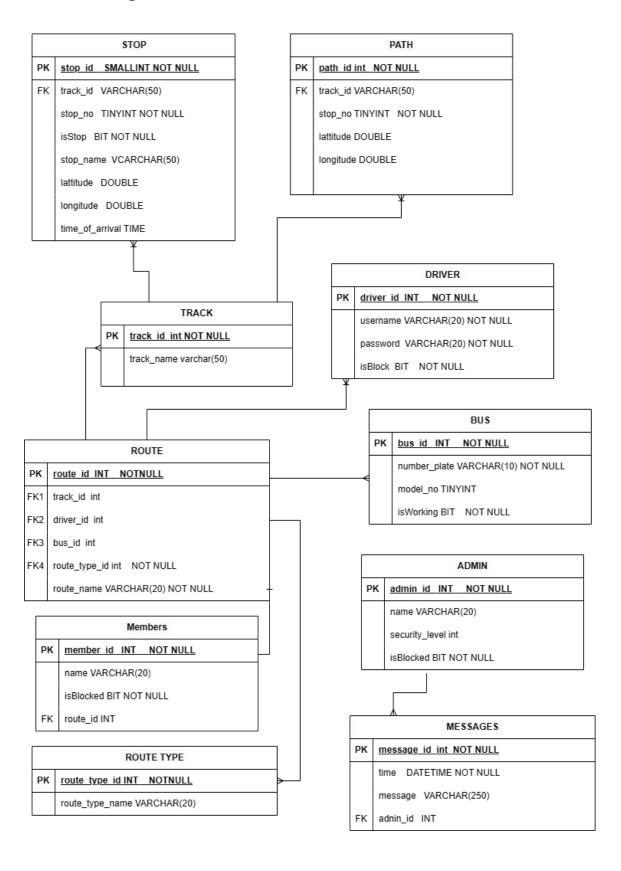

UML Diagrams:
